LEVERFORGE
Supply chain diagnostics

Find the cash hidden in your stock, suppliers and freight

We help small manufacturers and distributors cut inventory, purchasing and freight costs with fixed-price diagnostics delivered in 2–3 weeks.

Most growing businesses order by habit, hold more stock than they need, and pay freight rates nobody has checked in years. You send us your data. We send back a clear report showing where the money is and what to do about it.

Services

Each service is a fixed-price project with a written report and a walkthrough call.

Service	What you get	Price
Inventory and material flow diagnostic	ABC analysis of your stock, reorder points and safety stock for your key lines, a list of excess and slow-moving items, and the cash you can release	**From £1,500**
Freight cost audit	Your carrier rates and invoices checked against quotes, LCL vs FCL break-even for your import lanes, pallet and load improvements, and a savings estimate	**From £1,500**
Supplier and spend review	Spend broken down by supplier and category, a weighted supplier scorecard, a savings shortlist, and a ready-to-send quote request for your top categories	**From £2,000**

Further services. Demand forecasting and planning, warehouse layout and slotting reviews, supply chain risk assessments, tender and quote support, KPI dashboards and freight carbon footprint estimates. Each is quoted at a fixed price after your free review.

How it works

1. **Free 30-minute call.** We talk through your operation and agree which diagnostic fits.
2. **Fixed-price proposal within 24 hours.** One page: scope, price, and the data we need.
3. **You send the data.** Usually exports from your stock, purchasing or accounts system. A confidentiality agreement is signed first.
4. **Report in 2–3 weeks.** Findings, numbers and a prioritised action list, followed by a walkthrough call.

Most of the work is done remotely, and we are happy to meet face to face. Visits in Yorkshire are included; travel elsewhere is charged at cost. We reply to messages within 24 hours.

About Leverforge

Leverforge is an independent supply chain consultancy built on several years of hands-on supply chain and procurement experience.

- **Day-to-day material flow in manufacturing.** Experience keeping a high-volume production line supplied across a large supplier base, with purchase orders released daily.
- **Shortages caught early.** Using MRP signals to resolve shortages before they reach production, and forecasting material consumption to support planning and purchasing decisions.
- **Supplier management.** Regular performance reviews with key vendors and daily follow-up of overdue deliveries to protect production schedules.
- **Data tools.** SAP, Excel, Power BI, Python, SQL, Apple Numbers, Keynote and Pages.
